This product is designed and manufactured for safe and reliable service when installed, operated and maintained according to the information and installation codes referred to in this Guide.

⚠️ This is a safety alert symbol. When you see this symbol in this manual or on the product, look for one of the following signal words; DANGER, WARNING, CAUTION and NOTICE and comply with the information. Be alert to the potential hazard. Ensure to read and comply with all of the warnings and cautions in this manual.

Risk of Electrical Shock or Electrocution!
- Always disconnect power at the circuit breaker before servicing the load center
- Improper installation can create an electrical shock hazard that can result in death or serious injury.

⚠️ This product must be installed by a licensed or certified electrician or a qualified pool professional in accordance with the current National Electrical Code (NEC), NFPA 70 or the Canadian Electrical Code (CEC), CSA C22.1. All applicable local installation codes and ordinances must also be adhered to. Improper installation will create an electrical hazard which could result in death or serious injury to pool users, installers or others due to electrical shock, and may also cause damage to property. Always disconnect the power to the pool light at the circuit breaker before servicing the light. Failure to do so could result in death or serious injury to serviceman, pool users or others due to electrical shock.
**IMPORTANT WARNING AND SAFETY INSTRUCTIONS**

**DANGER**
Water temperature in excess of 100° F (37.7° C) may be hazardous to your health. Prolonged immersion in hot water may induce hyperthermia. Hyperthermia occurs when the internal temperature of the body reaches a level several degrees above normal body temperature of 98.6° F (37° C.). Effects of hyperthermia include:

1. Unawareness of impending danger.
2. Failure to perceive heat.
3. Failure to recognize the need to leave the spa.
4. Physical inability to exit the spa.
5. Fetal damage in pregnant women.
6. Unconsciousness resulting in danger of drowning.

The use of alcohol, drugs, or medication can greatly increase the risk of fatal hyperthermia in hot tubs and spas.

**WARNING**
A pool or spa pump must be installed by a qualified pool and spa service professional in accordance with the current National Electrical Code and all applicable local codes and ordinances. Improper installation may create an electrical hazard which could result in death or serious injury to pool users, installers, or others due to electrical shock, and may also cause damage to property.

**WARNING**
The use of alcohol, drugs, or medication can greatly increase the risk of fatal hyperthermia in hot tubs and spas. This product is intended to control heaters with built-in high limit circuits ONLY. Failure to do so may cause property damage or personal injury.

**WARNING**
Do not use this product to control an automatic pool cover. Swimmers may become entrapped underneath the cover.

**WARNING**
For units intended for use in other than single-family dwellings, a clearly labeled emergency switch shall be provided as part of the installation. The switch shall be readily accessible to the occupants and shall be installed at least five (5) feet (1.52 m) away, adjacent to, and within sight of, the unit.

**WARNING**
Except for listed spa-side remote controls, install a minimum of five (5) feet (1.52 m) from the inside wall of the pool and spa.

**WARNING**
The electrical supply for this product must include a suitably rated switch or circuit breaker to open all ungrounded supply conductors to comply with the current National Electrical Code (NEC), NFPA 70 or the Canadian Electrical Code (CEC), CSA C22.1. All applicable local installation codes and ordinances must also be adhered to. The disconnecting means must be readily accessible to the tub occupant but installed at least five 5ft. (1.52 m), (Canada 3 m (9.75 ft) from the inside wall of the pool.

**WARNING**
Use only copper supply conductor's rated for 60C/75C sized based on ampacity to support all loads (refer to NEC tables). Load center input supply to be protected by 150 Amp Maximum, 240 VAC Main Circuit Breaker.

For information about the Virginia Graeme Baker Pool and Spa Safety Act, contact the Consumer Product Safety Commission at (301) 504-7908 or visit www.cpsc.gov.

NOTE: Always turn off all power to the pool pump before installing the cover or working on any suction outlet.

**Two Speed Pump Controls Notice (Title 20 Compliance)** - Please read the following important Safety Instructions - When using two-speed pumps manufactured on or after January 1, 2008, the pump's default circulation speed MUST be set to the LOWEST SPEED, with a high speed override capability being for a temporary period not to exceed one normal cycle, or two hours, whichever is less.
IMPORTANT WARNING AND SAFETY INSTRUCTIONS

FCC Standard - 47 CFR Part 15, Subpart C (Section 15.247). This version is limited to chapter 1 to chapter 11 by specified firmware controlled in the U.S.A.

Instruction to user - This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Note: In order to maintain compliance with FCC regulations, shielded cables must be used with this equipment. Operation with non-approved equipment or unshielded cables is likely to result in interference to radio and TV reception. The user is cautioned that changes and modifications made to the equipment without the approval of the manufacturer could void the user’s authority to operate this equipment.

Canada - Industry Canada (IC) Regulatory Notice: - This device complies with RSS210 of Industry Canada. (1999).

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication. This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Conformément à la réglementation d’Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d’un type et d’un gain maximal (ou inférieur) approuvé pour l’émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l’intention des autres utilisateurs, il faut choisir le type d’antenne et son gain de sorte que la puissance isotope rayonnée équivalente (p.i.r.e.) ne dépasse pas l’intensité nécessaire à l’établissement d’une communication satisfaisante. Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.

RF Exposure Requirements: The antenna(s) used for this device must be installed to provide a separation distance of at least 7.0 inches (20 cm) from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

L'antenne (s) utilisé pour cet appareil doit être installé pour fournir une distance de séparation d’au moins (20 cm) à partir de toutes les personnes et ne doit pas être co-localisés ou fonctionner en conjonction avec une autre antenne ou un autre émetteur.
General Installation Information

1. All work must be performed by a licensed electrician, and must conform to all national, state, and local codes.
2. Install to provide drainage of compartment for electrical components.
3. If this system is used to control underwater lighting fixtures, a ground-fault interrupter (GFCI) must be provided for these fixtures. Conductors on the load side of the ground-fault circuit-interrupter shall not occupy conduit, junction boxes or enclosures containing other conductors unless such conductors are also protected by a ground-fault circuit-interrupter. Refer to local codes for details.
4. A terminal bar stamped 🍀 is located inside the supply terminal box. To reduce the risk of electric shock, this terminal must be connected to the grounding means provided in the electric supply service panel with a continuous copper wire equivalent in size to the circuit conductors supplying this equipment (no smaller than 12 AWG or 3.3 mm). The bonding lug(s) provided on this unit are intended to connect a minimum of one No. 8 AWG for US installation and two No. 6 AWG for Canadian installations solid copper conductor between this unit and any metal equipment, metal enclosures or electrical equipment, metal water pipe, or conduit within 5 feet (1.52 m) of the unit.
5. The electrical supply for this product must include a suitably rated switch or circuit breaker to open all ungrounded supply conductors to comply with in accordance with the current National Electrical Code (NEC), NFPA 70 or the Canadian Electrical Code (CEC), CSA C22.1. All applicable local installation codes and ordinances must also be adhered to. The disconnecting means must be readily accessible to the tub occupant but installed at least 10 ft. (3.05 m) from the inside wall of the pool.
6. GAS HEATER: This automation control system is designed to supply high voltage (120 VAC / 240 VAC) to a gas heater and override the thermostat in the heater's control circuit. This automation control system is intended to control gas heaters with a high temperature limit switch(s) safety circuit.

EasyTouch® PL4/PSL4 Control Systems Power Center Overview

Introduction

EasyTouch PL4/PSL4 Control Systems Configuration

• EasyTouch Pool Lite 4 Circuit (PL4 - Four circuit pool only system)
• EasyTouch Pool and Spa Lite 4 Circuit (PSL4 - Four circuit pool and spa shared equipment system)

EasyTouch PL4/PSL4 Control Systems provides control for high voltage (120 VAC / 240 VAC) equipment, automatic valve actuators, pumps, lighting, a conventional heater or a solar heating system, heat pump, and the optional IntelliChlor® Salt Chlorine Generator and IntelliChem® Water Chemistry Controller.

Pool and spa service operations can be manually controlled from the Outdoor Control Panel located in the Power Center at the pool equipment pad.

Also available are the optional Indoor Control Panel, Wireless Controller, iS4 Spa-Side Remote, and the QuickTouch® Remote Controller for complete control of pool and spa operations from inside your home or outside around your pool area. The Power Center dimensions are 20” H x 17” W x 5¼” D.

Features

• Dimensions: 20” H x 17” W x 5-1/4” D
• Includes three 25 AMP HP relays
• 120/240 V transformer with secondary side circuit protection
• Provides ample space for all high and low voltage wiring requirements
• Multiple knockouts for different sizes of conduit are supplied
• GFCI side knockout
• The Power Center enclosure is used with external circuit breakers/sub-panel for pool and spa equipment

Kit Contents

The following items are included in the Power Center kit

• EasyTouch PL4/PSL4 Control Systems Power Center Enclosure
• Relays: Qty. 4
• Actuators: (Qty. 2 for PSL4 Control System only)
• Temperature Sensor (all models): Water Sensor Long Cable (Qty. 1) (o-ring and hose clamp)
  Air sensor - Short cable (Qty. 1)
• Wiring Diagram Label - To affix to the inside front door (see power center door).
• Parts bag: Relay screws (Qty. 0, 4, 8, or 10) label sheet
• EasyTouch PL4/PSL4 Control Systems Power Center Installation Guide (this manual).
• For additional information, refer to the EasyTouch PL4/PSL4 Control Systems User’s Guide (P/N 522461).
EasyTouch® PL4/PSL4 Control System Optional Accessories

Choose one or more of the following optional accessories to control pool and spa operations.

- **iPhone™/iPad® Touch Interface (P/N 520500)** – Includes Protocol Interface Adapter that connects to existing Desktop or Laptop PC. This allows control of EasyTouch PL4/PSL4 Control System via PC (requires PC with an Ethernet connection, and Windows® XP/Win7/Win8 operating system).

- **iTC35 Kit (P/N 520502)** – Includes in-wall color touch screen with Ethernet (RJ45) connection and Protocol Interface Adapter and wireless router. The in-wall Touch screen is custom configured for EasyTouch PL4/PSL4 and EasyTouch PL4/PSL4 systems. Requires an Ethernet cable to router.

- **Indoor Control Panel (P/N 522465) Optional** – Monochrome backlit LCD control panel. Connects to the EasyTouch PL4/PSL4 Control System circuit board in the Power Center.

- **Wireless Controller (P/N 522464)** – Monochrome backlit LCD control panel. Connects to the EasyTouch PL4/PSL4 Control System via a transceiver connected to the control system circuit board in the Power Center.

- **QuickTouch® II (P/N 521245) and QT4 (P/N 520148) Wireless Remote**: Four-function wireless remote for pool and spa functions of your choice. This controller transmitter operates up to 150 feet range from the Power Center.

- **iS4 Spa-Side Controller (P/N 520094)**: 4-function (iS4) Spa-Side remote controller for pool and spa functions of your choice. The controllers can operate up to 150 feet range from the Power Center.
Before installing the EasyTouch® PL4/PSL4 Control Systems Power Center Installation Overview read the following guidelines carefully:

- The Power Center must be installed at the equipment pad.
- AC power for the Power Center must be provided from the main circuit breaker panel located at the house.
- All electrical equipment, except for UL Listed spa-side remote switches, must be installed no less than five (5) feet (1.5 m), (Canada, 3 mm (9.75 ft) from pool and/or spa, and comply with all national, state, and local codes (UL Listed spa-side remote switches may be installed at near waterline).
- Install the Power Center no less than five (5) feet (1.5 m) from pool, spa, and hot tub. Additionally, the installation shall allow the user enough space to stand clear of the filter and pump during system start-up, as explained on page iii.
- The TYPE 3R “Rainproof” enclosure can be mounted outside or inside of a pool equipment shed or other enclosure.
- Before choosing the final location for the enclosure, consider the length of all of the conductors that will have be connected to the enclosure. Make sure to consider cable lengths for the sensors to the Power Center location. The air temperature sensor cable is three (3) feet (91.44 cm) long and the water temperature sensor cable is 25 feet (7.62 m) long.
- Mount the Power Center on a flat vertical surface so the conduit knockouts are located at the bottom of the enclosure. Upper and lower brackets are provided to mount the enclosure.
- DO NOT mount the enclosure horizontally. Water can enter the conduit knockouts and cause damage to the system and an electrical shock hazard. Install with conduit knockouts down.
- Consider the Power Center location when routing conduit carrying the AC power to the Power Center, and the conduit that will be run to the high voltage equipment.
- Install the Power Center so that drainage is provided for all electrical components.
- Motors should be listed for pool and spa applications and have built-in thermal protection.
- Allow unobstructed access to the front of the Power Center for the owner and service personnel.
- The Power Center provides grounding screw terminals for grounding all equipment. All equipment including the Power Center enclosure must be bonded to earth ground.
EasyTouch® PL4/PSL4 Control Systems Power Center

The EasyTouch PL4/PSL4 Control Systems Power Center (without sub-panel) should be installed at the equipment pad. AC power to the Power Center is provided from the an electrical circuit breaker panel (sub-panel) installed at the equipment pad. The Power Center should be installed next to the sub-panel.
Preparing the Power Center Enclosure

BEFORE INSTALLING THE Power Center AND POWER CENTER, ALWAYS SWITCH OFF THE MAIN POWER into the home at the main circuit breaker box.

Before mounting the Load Center, first remove the front door and the high voltage cover panel to access the enclosure conduit knockouts and low voltage raceway (see pages 3 and 4). To install and connect system devices to the Power Center:

1. Unpack the Power Center from the shipping carton. Unlatch the front door spring latch and open the front door.
2. Remove the two retaining screws from the High Voltage Cover Panel. Remove the panel from the enclosure.
3. Loosen the two retaining screws securing from the top edge of the Outdoor Control Panel. Fold down the Outdoor Control Panel to access the circuit board sockets connectors for the electrical connections.
4. For new installation, proceed with:
   • **Mounting the Power Center**, page 6
   • **Before Installing Conductors/Connecting AC Power to the Power Center**, page 7
   • **Electrical Wiring and High Voltage Connections**, page 8
   • **Installing Conduit and Conductors to the Power Center**, page 9
   • **Accessing the System Circuit Board and Electronics**, page 10
5. After electrical connections have be completed; close the Outdoor Control Panel and tighten the two retaining screws. Reinstall the High Voltage Panel: Insert the panel’s three tabs into the lower slots on the enclosure. Secure the panel with the two (2) retaining screws. Close the front door and secure with the latch.

Flip down the Outdoor Control Panel to access circuit boards in low voltage compartment

Retaining screws (for Outdoor Control Panel)

Retaining screws (for High Voltage Cover Panel)

Front door

Slots for High Voltage Cover Panel

EasyTouch® PL4/PSL4 Control Systems Power Center (front view)
Mounting the EasyTouch® PL4/PSL4 Control Systems Power Center

Mount the EasyTouch PL4/PSL4 Control Systems Power Center enclosure on a flat vertical surface, such as a wall or post at eye level, at least 5 ft. (1.5 m), (Canada 3 m (9.75 ft)) from the pool, spa or hot tub.

To mount the Power Center:

1. Position the enclosure against a vertical flat surface. If wall anchors are being used, support the enclosure in position (horizontally level and square) against the surface and mark the bracket hole pattern on the wall.

2. Secure the enclosure with three (3) screws in the top and lower mounting bracket holes. If using wall anchors, drill and set the anchors and secure the enclosure with screws.
Connecting AC Power to the Power Center

Before installing electrical conduits and connecting AC power to the Power Center enclosure, read the following recommended guidelines:

**NOTE:** All electrical installation, including electrical wiring methods and materials used to complete the electrical installation of the EasyTouch PL4/PSL4 Control Systems MUST BE PERFORMED BY A SERVICE PROFESSIONAL AND/OR UNDER DIRECT SUPERVISION OF A QUALIFIED ELECTRICIAN in accordance with the National Electrical Code or the Canadian Electric Code, as well as any local electrical codes in effect at the time of installation. Refer to NEC 680 (b) or CEC 687-060, 062, and 066 for further details.

- Determine the number of low and high voltage circuits being used in the EasyTouch PL4/PSL4 Control Systems. The conduit size and runs is based on the conductor size, and the number of conductors within the conduit. The **number of pieces of equipment to be controlled will dictate the size of the conduit. DO NOT RUN HIGH VOLTAGE AND LOW VOLTAGE CONDUCTORS IN THE SAME CONDUIT.**

- Use 14 AWG minimum to 6 AWG maximum 140°/158° F (60°/70° C) or better copper conductors for relay circuits depending on the load requirement. Be sure to follow all NEC regulation safety codes for the number and size of conductors that can be installed in various sizes of conduit.

- Supply conductor must be sized to support all loads. The maximum supply current must NOT exceed 150 AMP at 120 VAC/240 VAC.

- Supply circuit must be protected by suitable breaker rated no higher than 150 AMP. If one relay is used for more than one device, verify that the total current draw (all equipment) does not exceed the current rating of the circuit.

- The EasyTouch PL4/PSL4 Control Systems circuit board requires 120 VAC, 3A power to operate the control logic circuits. The optional IntelliChlor® Salt Chlorine Generator must be powered from it’s own external Power Supply (provided with the IntelliChlor SCG cell).

Connecting AC Power to the Power Center

Before installing electrical conduits and connecting AC power to the Power Center enclosure, read the following recommended guidelines:

- **WARNING** TO AVOID AN ELECTRICAL HAZARD AND EQUIPMENT DAMAGE TO THE POWER CENTER AND INTELLICHLOR SCG CELL: FIRST DISCONNECT AC POWER TO THE LOAD CENTER BEFORE CONNECTING THE INTELLICHLOR SCG COMMUNICATION CABLE.

- Determine the number of low and high voltage circuits being used in the Power Center. The conduit size and runs needed based on the conductor size, and the number of conductors within the conduit. The enclosure conduit knockouts sizes are 1¼”, 1”, ¾” and ½”.

- Enclosure conduit knockouts for AC power are located on the sides, bottom and back of the enclosure. Conduit knockouts sizes for AC power are: 1¼”, 1”, ½” and ¾”. It is recommended to use 1¼” x 1” conduit for the main AC power conductors.

- The Power Center enclosure must be located a minimum of 5 ft. (1.5 m), (Canada 3 m (9.75 ft)) from the inside wall of pool or spa.

Remove the enclosure conduit knockouts as needed:

- Low voltage raceway has two ½” x ¾” conduit knockouts located on the left side and rear of the enclosure.

- High voltage compartment has twelve ½” x ¾”, five ¾” x 1” and two 1¼” x 1” conduit knockouts located on the bottom of the enclosure.

- To avoid obstruction into the Power Center, when using electrical conduit complete the installation of the conduit before concrete is poured. Also, underground conduit should be positioned in well compacted soil. Ensure that all conduit joints are well sealed and watertight.
Electrical Wiring and High Voltage Connections

Power Center Main AC Power Connection (External Circuit Breakers - Sub-Panel)

External (sub-panel) circuit breakers need to be supplied and installed by the site installer. Run properly rated conductors (L1,L2, N, and GROUND) from the primary house electrical panel to the main AC power connections on the Power Center transformer (see page 21). The connection at the main house panel should be to a 240 VAC circuit breaker rated at 150 AMP maximum.

For recommended circuit breaker types, refer to the circuit breaker chart on the inside front door of the Power Center. Be sure to follow all manufacturer’s circuit breaker rating requirements. Some pool equipment require connection to ground fault circuit breakers (GFCI). Check the current local and NEC (CEC) codes for these requirements. Note: For recommended field conductor gauge usage, refer to conductor size listed on the circuit breaker label.

Grounding and Bonding Connections

Connect a ground conductor from the primary house electrical panel to the Power Center GROUND BUS BAR (see page 21). Also ground each piece of high voltage (120 VAC or 240VAC) equipment that is connected to the Power Center relays or circuit breakers. Also connect the Power Center to the pool bonding system using 8 AWG (6 AWG for Canada) conductor. There are two (2) GROUND LUGS provides on the bottom of the Power Center (see page 4).

Note: Wiring to Power Center: 14 AWG minimum copper conductors for relays and other equipment sized according to the ampacity of the load.
Installing Conduit and Conductors to the Power Center

- Use the rectangular knockout on the right side of the Power Center enclosure to mount an approved GFCI or GFCB with rainproof type 3R cover (supplied by installer) for direct connection of underwater pool and spa lights.
- Use the one of the three low voltage raceway 3/4” holes located on the underside of the enclosure for the temperature sensor conductors (see page 4).

**DANGER**

TO AVOID AN ELECTRICAL HAZARD - Do not connect the power source conductors to the Power Center until all electrical connections for all loads (heaters, pumps, motorized valves, and lights etc.) have been completed.

**NOTICE:** For the AC supply conductor into the Power Center from the main circuit breaker at the house, use three conductors, one each for red, black, and white (or red, red and black for 240 VAC). The maximum load is 150 AMP at 120 VAC/240 VAC 60 Hz/50 Hz. These conductors should be secured to supply side of circuit breaker base. For the main AC power conduit, it is recommended to use the 1¼” x 1” conduit knockout located directly under the enclosure circuit breaker (see page 4).

**EasyTouch PL4/PSL4 Control Systems Power Center AC Wiring Instructions**

- See page 21 to rewire the system transformer for 240 VAC.

Note: For system wiring diagram, see page 31 and the inside front door of Power Center.
Accessing the System Circuit Board and Electronics

The EasyTouch PL4/PSL4 Control Systems circuit board is mounted on the front of the Power Center. The system circuit boards and electronics are located behind the Outdoor Control Panel. The circuit boards provide socket connectors for the auxiliary relays, valve actuators, sensors, gas heater and related equipment. To access the circuit boards, fold down the Outdoor Control Panel.

To access the circuit board connectors:

1. Unlatch the front door spring latch and open the front door.
2. Remove the two retaining screws from the High Voltage Cover Panel. Remove the panel from the enclosure. See illustration below.
3. Loosen the two retaining screws securing from the top edge of the Outdoor Control Panel. Fold down the Outdoor Control Panel to access the circuit board sockets connectors for the electrical connections. See illustration below.
4. Install the following:
   - Connecting the System Relays, page 11
   - Connecting Valve Actuators, page 12
   - Installing and Connecting Temperature Sensors, page 13
   - Installing a Standard Gas Heater, page 16
5. After electrical connections have be completed, close the Outdoor Control Panel and tighten the two retaining screws. Reinstall the High Voltage Panel: Insert the panel’s three tabs into the lower slots on the enclosure. Secure the panel with the two (2) retaining screws. Close the front door and secure with the latch.

Flip down the Outdoor Control Panel to access circuit boards in low voltage compartment

EasyTouch® PL4/PSL4 Control Systems Power Center (front view)
Connecting the System Relays

The EasyTouch PL4/PSL4 Control Systems Power Center includes three pre-installed relays (Filter Pump, AUX1, AUX2, AUX3). To connect the pre-installed relay cable plugs to the EasyTouch PL4/PSL4 Control Systems circuit board:

- Route each of the power relay cable plugs up into the low voltage compartment to the EasyTouch PL4/PSL4 circuit board. See illustration on page 5.
- Insert the relay plugs into the two-pin sockets on the circuit board, beginning with FLTR PUMP, then AUX1, AUX2, and AUX3. For the actuator two-pin socket locations, see below. For the EasyTouch PL4/PSL4 Control Systems wiring diagram, see page 31 or the Power Center front door inside panel.

**Note:** Install the optional Two-Speed Pump relay (P/N 520198) cable plug into the 2SPD two-pin socket on the EasyTouch PL4/PSL4 Control Systems circuit board. For installation and operation information, refer to the Two-Speed Relay User's Guide (P/N 520210).

---

**SPECIAL PURPOSE RELAY OUTPUTS**

- Electric Heater
- Solar Booster Pump
- 2-Speed Filter Pump
- Activates with Spa Mode

**FILTER PUMP AND AUXILIARY RELAYS**

- Electric Heater
- Solar Booster Pump
- 2-Speed Filter Pump
- Activates with Spa Mode

---

**PL4/PSL4 Control System Circuit Board**

- Auxiliary relay locations
- Optional relay positions
Installing Valve Actuators

The EasyTouch PL4/PSL4 Control Systems can control up to four automatic valve actuators. Two of the valve outputs are dedicated to the pool/spa intake (INTAKE) and return (RETURN) valves. Valve A or Valve B actuators are for general purpose use (solar, water-feature, in-floor cleaner, etc.). For EasyTouch PL4/PSL4 Control Systems shared equipment systems there are two motorized valve actuators (CVA-24T, P/N 263045) provided in the kit.

To install the valve actuator (two-way valve example shown):

1. Remove the valve knob, handle and the four screws, from the valve cover (indicated with arrows).
2. Align the splines of the actuator shaft over the shaft of the valve.
3. If the actuator is not aligned with the mounting holes on the valve cover, rotate the actuator (while still attached to the valve) until the actuator is positioned correctly over the valve.
4. Secure the actuator with the screws provided. Only use self-tapping screws when required.
5. Mount the valve handle and knob onto the actuator.

Valve Handle Operation: To reposition the valve handle: Rotate the handle to the desired “OFF” position. The diverter valve handle OFF indicator, represents the current position of the valve’s internal diverter seal which will stop the flow of water. The valve handle stop-pins determine the position of the diverter valve’s internal seal to stop or allow water flow. Note: When a motorized valve actuator is installed, stop-pins are not required.

Handle Stop-Pins Positions: The two movable stop-pins can be set to allow the valve handle’s position to completely stop the flow of water, regulate a limited flow, or allow the maximum flow. To set the stop-pins: Insert the stop-pins in the pin holes according to the corresponding “degree indicator” displayed on top of the handle. The stop-pin positions can be set to 180°, L90° (left-side) and R90° (right side). Repositioning of either stop-pins allows the handle to be set to any desired percentage of water flow.
6. At the Power Center, route the cable up through the 1” grommet and low voltage raceway to the circuit board. See illustration on page 4 and 8.

7. **EasyTouch® PL4/PSL4 Control Systems Circuit Board:** Connect the Valve A actuator cable plug into the **INTAKE** (suction) 3-pin socket, and Valve B actuator cable plug into the **RETURN** three-pin socket on the right side of the EasyTouch PL4/PSL4 Control Systems circuit board. Excess cable can be coiled in the enclosure low voltage raceway left side compartment (see page 3). Do not coil the conductor in upper low voltage compartment. For valve actuator circuit board socket location as shown below. For plumbing requirements, see Item 2 and 3 on page 36.

![PL4/PSL4 Control System Circuit Board](image)

**Installing and Connecting Temperature Sensors**

**Water Temperature Sensor**

To install the water sensor:

1. Select a convenient location to mount the water sensor in the plumbing system between the filter pump and filter. Drill a 3/8” diameter hole in one side of the pipe,

2. Insert tip of sensor into the hole. Use the band clamp to secure the sensor to the pipe. Tighten the clamp just enough so that the o-ring begins to flatten. Do not overtighten

3. Fasten the cable to the plumbing with cable ties.

4. Run 22 AWG two-conductor cable (included in kit) between the sensor and the enclosure. Route the cable up through the low voltage raceway to the circuit board.

5. Cut off the excess conductor and the strip conductors 1/4 inch. Use waterproof connectors (provided) to connect the sensor to cable.

6. Insert the conductors into the **WATER SENSOR** screw terminals (J21) on right-side of the motherboard. For sensor circuit board screw terminal location see illustration on next page and page 31).

**Ambient Air Temperature Sensor (for freeze protection)**

To install the air sensor:

1. Mount the sensor in the open air, in a shaded area, away from air conditioners. During the winter months, to avoid freeze damage to pool and spa equipment, mount the air sensor in a shaded area to assure proper temperature readings. The main screen displays the current ambient air temperature.

2. Fasten the cable to the plumbing with cable ties.

*Continue with Step 3 on next page.*
3. Run 22 AWG two-conductor cable (included in kit) between the sensor and the enclosure. Route the cable up through the low voltage raceway to the circuit board. See illustration on page 5.

4. Cut off the excess conductor and the strip conductors ¼ inch. Use waterproof connectors (provided) to connect the sensor to cable.

**EasyTouch® PL4/PSL4 Control Systems:** Insert the conductors into the AIR screw terminals (J21) on right side of the EasyTouch PL4/PSL4 Control Systems circuit board. For sensor circuit board screw terminal location (see illustration below and page 31).

---

**Temperature vs. Resistance Data**

The EasyTouch PL4/PSL4 Control Systems use 10k Ohm thermistor sensors. When the solar sensor is disconnected from the control system, the sensor will read 10k Ohm at 77°F (25°C). Refer to the following table for the resistance at other temperatures. An accurate reading should give a temperature setting that is accurate.

**Solar Temperature Sensor (Optional)**

Run a two-conductor cable between the sensor and the EasyTouch® PL4/PSL4 Control Systems circuit board in the Power Center. Route the cable up through the low voltage raceway to the Power Center circuit board. See illustration on page 5.

To install the solar sensor:

1. Mount the sensor on a flat surface, with the same exposure to sun as the solar collectors (next to the collectors is recommended) or any sunny location. Do not let the sensor touch the panels. **WARNING: DO NOT DRILL HOLE AND CLAMP SENSOR INTO SOLAR PIPE.** For glazed panels, install the sensor between collector and glazing.

2. If necessary, splice a two-conductor extension conductor to the sensor. Run two-conductor cable between the sensor and the Power Center. Use waterproof connectors to connect the sensor to the cable. Use twisted pair 20 AWG outdoor rated sensor wiring and be sure the conductor connections are protected from the environment. Use shielded cable for long runs or runs near other electrical wiring.

3. Cut off the excess conductor and the strip back conductors ¼ inch. Use waterproof connectors (provided) to connect the sensor to cable.

4. Insert the conductors into the **SOLAR SENSOR** screw terminals (J21) on right side of the EasyTouch PL4/PSL4 Control Systems circuit board. For sensor circuit board screw terminal location (see illustration below and page 31).
Connecting a Standard Gas Heater

For the EasyTouch® PL4/PSL4 Control Systems heater control, there are low voltage dry contacts that can be connected to most gas heaters or heat pumps with 24 VAC control circuits. The following connection instructions are for gas heaters and heat pumps with low voltage thermostats.

To connect the heater thermostat cable plug to the EasyTouch PL4/PSL4 Control Systems circuit board:

1. Switch the power OFF to the heater.
2. Remove the factory installed jumper from the heater’s “Ext Switch” connector. **CAUTION IMPORTANT: DO NOT** disconnect or conductor around the thermostat, pressure switch, high limit switch, or other safety devices. At the heater, connect the conductors in accordance with heater manufacturer’s instructions. For older heaters without instructions for remote operation, connect the conductors to the Fireman’s switch connections in series with the thermostat, pressure switch, and other safety switches.
3. Run a two-conductor cable from the heater thermostat “Ext Switch” connector to the low voltage raceway (see illustration on page 5) to the Personality board in the Power Center. **NOTE:** Use 221°F (105°C) temperature rated conductor for connection to the heater. When connecting conductors inside the heater, be cautious of HOT internal parts of the heater. Refer to the minimum temperature rating for conductors recommended by the manufacturer. See the heater owners manual for details.
4. Strip back the conductors ¼ in. Insert the conductors into the GAS HEATER two-screw terminals (J19) on the motherboard. For heater circuit board screw terminal location, see illustration below and page 31).

**CAUTION:** Be sure that the conductors from the heater to the EasyTouch PL4/PSL4 Control Systems Power Center are not near or touching any line voltage conductors in the heater. Failure to follow these instructions may cause the heater to malfunction.

5. Set the Power (Thermostat Select) switch to either “Pool” or “Spa.”
6. Set the “Pool” and “Spa” thermostats to their maximum position.
Connecting a Pentair UltraTemp® Heat Pump to the System COM Port

Be sure to check the UltraTemp Heat Pump terminal block conductor colors and pinouts (located on the back of the Auto Set board) before connecting it to the EasyTouch® PL4/PSL4 Control Systems COM port. The See the wiring table below for the pin configuration.

**IMPORTANT:** On the UltraTemp heat pump AutoSet circuit board ONLY CONNECT PIN 3 (YELLOW) and PIN 2 (GREEN) to the EasyTouch PL4/PSL4 Control Systems COM port pins YELLOW and GREEN respectively. Do not connect pin 1 or pin 4 on the AutoSet board or the COM port. These pins are not

Connecting an IntelliFlo® Pump to the System COM Port

(see Illustration on page 20)

The RS-232 communication cable (provide with IntelliFlo pump) consists of a 50 ft 22 AWG four conductor low voltage cable. The EasyTouch PL4/PSL4 Control Systems filter pump output is rated at 120 VAC, 15 AMP maximum. Check the electrical rating marked on the pump motor before connecting it to the system.

To connect the IntelliFlo pump communication cable to the Power Center:

1. **Switch OFF power Power Center at the main house circuit breakers.**
2. Run the communication cable from the pump to the enclosure.
3. Insert the cable conductors into the one of the plastic grommet fittings, located on the lower left side of the enclosure and pull the cable up through the low voltage to the PL4/ EasyTouch PL4/PSL4 Control Systems circuit board. See illustration on page 19.
4. Strip back the outer jacket four (4) inches. Strip back each conductor a ¼-inch.
5. Insert the conductors into the COM Port (J20) screw terminals located on the top of the EasyTouch PL4/PSL4 Control Systems circuit board (see illustration below and page 31). Secure the conductors with the screws. For wiring details, refer to the pin configuration shown below. Note: Multiple conductors may be inserted into a single screw terminal.
**IMPORTANT! IntelliChlor (SCG) AC transformer wiring Instructions:** When using the EasyTouch PL4/PSL4 Control Systems with the IntelliChlor (SCG) option, be sure the IntelliChlor (SCG) AC transformer conductors are connected to the LOAD SIDE OF THE MAIN FILTER PUMP RELAY located in the enclosure (see page 20). This ensures that the IntelliChlor cell produces chlorine only when the main filter pump is on. This method does not require a ground fault circuit-interrupter (GFCI) for the IntelliChlor power center.

### Connecting an IntelliChem® Controller to the System COM Port

Be sure to check each conductor color between IntelliChem Controller and the EasyTouch PL4/PSL4 Control Systems Power Center COM port terminals as shown in the following wiring table.

<table>
<thead>
<tr>
<th>IntelliChem Controller COM Port (J7) wiring color connection</th>

Wiring IntelliChlor (SCG) Transformer to Filter Pump Relay

IMPORTANT! IntelliChlor (SCG) AC transformer wiring Instructions: When using the EasyTouch PL4/PSL4 Control Systems with the IntelliChlor (SCG) option, be sure the IntelliChlor (SCG) AC transformer conductors are connected to the LOAD SIDE OF THE MAIN FILTER PUMP RELAY located in the enclosure (see page 20). This ensures that the IntelliChlor cell produces chlorine only when the main filter pump is on. This method does not require a ground fault circuit-interrupter (GFCI) for the IntelliChlor power center.

BEFORE REMOVING THE HIGH VOLTAGE COVER PANEL FROM THE POWER CENTER, switch OFF the main power at the house circuit breaker box.

TO AVOID AN ELECTRICAL HAZARD AND EQUIPMENT DAMAGE TO THE ENCLOSURE AND INTELLICHLOR CELL: FIRST DISCONNECT AC POWER TO THE ENCLOSURE BEFORE CONNECTING THE INTELLICHLOR COMMUNICATION CABLE.

Connect the IntelliChlor (SCG) transformer conductors to the main filter pump relay as follows:

1. **Switch OFF AC power** to the Power center at the house panel circuit breaker.
2. Loosen the two retaining screws securing HIGH VOLTAGE FRONT COVER PANEL. Remove the panel from the enclosure (see illustration below).
3. **Locate the FILTER PUMP RELAY. Connect the IntelliChlor SCG transformer conductors to the LOAD SIDE of the relay.** See relay wiring diagram shown on page 20.
4. After electrical connections have been completed, install the HIGH VOLTAGE FRONT COVER PANEL and tighten the two retaining screws to secure in place.
5. **Switch AC power ON** to the Power Center.

Flip down the Outdoor Control Panel to access circuit boards in low voltage compartment.

EasyTouch® PL4/PSL4 Control Systems Installation Guide
Rewiring the Power Center System Transformer for 240 VAC

The EasyTouch® PL4/PSL4 Control Systems Power Center system transformer can be wired for 120 VAC at 2AMP 50/60 Hz (factory installed) or 240 VAC at 1AMP 50/60 Hz. The system transformer is pre-wired at the factory for 120 VAC service.

To rewire the system transformer and for 240 VAC:

1. SWITCH OFF AC POWER the Load Center and/or Power Center at the main circuit breakers.
2. Unlatch the front door latch and open the front door. Remove the two (2) retaining screws securing the high voltage cover panel. Remove the HIGH VOLTAGE COVER PANEL from the enclosure.
3. Rewire the system transformer for 240 VAC as shown in the wiring diagram below.
4. Reinstall the High Voltage Panel: Insert the panel’s three tabs into the lower slots on the enclosure. Secure the panel with the two (2) retaining screws.
5. Close the front door and secure with the latch.

WARNING BEFORE REMOVING THE HIGH VOLTAGE COVER PANEL FROM THE POWER CENTER SWITCH OFF POWER AT THE HOME CIRCUIT BREAKER.
Installing the Indoor Control Panel

The following procedure describes how to install the EasyTouch PL4/PSL4 Control Systems Indoor Control Panel into the Power Center. Read through the installation procedure before starting.

The PSL4 Control System Indoor Control panel provided one-touch controls for your pool, spa, lights and other functions from inside your home or a sheltered location. Select a convenient wall location inside your house or other weather-protected location for mounting the control panel.

Drill control panel wall mounting holes

To drill the control panel mounting holes (see diagram on next page):

1. The control panel is 5¾” wide. Using the cutout template shown below, mark the two screw locations on the wall for the mounting holes. Drill the two mounting holes. If the screws are not being screwed into studs, drill 3/16” holes and insert wall anchors as required.

2. Drill a 1 inch hole in the area shown in the template for the communication cable to feed through.

![Diagram of control panel mounting holes](image_url)
Connecting the Indoor Control Panel to the System COM Port

To connect the Indoor Control Panel cable to the Power Center circuit board:

1. **Switch OFF power OFF to the Power Center** before making any connections.

2. Run a UL approved four conductor cable (22 AWG) from the Indoor Control Panel to the Power Center. The preferred wire color scheme is: Red, yellow, green, and black.

3. Route the cable up through the Power Center lower grommet and up through the low voltage raceway to the circuit board. See illustration on page 19).

4. Strip back the communication cable conductors ¼ in. Insert the wires into the screw terminals (provided in the kit). Secure the wires with the screws. Make sure to match the color-coding of the wires: Red = +15, Yellow = +DT, Green = -DT, and GND = Black.

5. Insert the cable plug onto the **COM-PORT (J20)** connector.

Mounting and Cabling the Indoor Control Panel

To mount and connect the communication cable to the EasyTouch PL4/PSL4 Control Systems Indoor Control Panel:

1. Route the cable through the house wall to the location of the Indoor Control Panel. Pull a working length of the communication cable out of the wall.

2. Remove the control panel front cover from the back plate: Unsnap the bottom edge of the front of the control panel cover from the back plate.
3. Strip the leads of the communication cable wires ¼ in. Insert the four wires into the screw terminals. Make sure to match the color-coding of the four wires as shown on the screw terminal.

4. Feed the cable back into the wall so that the remainder left outside the wall fits behind the back plate. Mount the control panel back plate on the wall. Secure the back plate with the two retaining screws.

5. Install two pan head retaining screws in the back plate holes. Tighten the two screws to secure the back plate on the wall.

6. Mount the control panel cover over back plate and snap in place to secure.

7. After the Power Center is powered up the indoor control panel will automatically synchronize system information from the outdoor control panel then the indoor control panel is ready for operation. Note: If “Unit Mismatch” display on the indoor control panel you have the choice to download the system image from the outdoor control panel or upload system information from the indoor control panel to the outdoor control panel.
Installing the Wireless Controller Transceiver

The following procedure describes how to install the EasyTouch PL4/PSL4 Control Systems Wireless Controller transceiver module and connect the transceiver cable to the COM port on the motherboard. Read through the installation procedure before starting.

EasyTouch PL4/PSL4 Control Systems Wireless Controller kit

The EasyTouch PL4/PSL4 Control Systems wireless control panel kit consists of:

- EasyTouch PL4/PSL4 wireless control panel
- Four AA-size alkaline batteries
- Transceiver module
- Four plastic anchors and retaining screws (to mount the transceiver module)

Mounting the Wireless Transceiver

The Transceiver is a two-way radio device with an attached antenna that communicates to and from the control system via the wireless hand-held wireless control panel. Mount the Transceiver module at a convenience location (on a flat vertical surface) near the Power Center, at a minimum of 5 ft. above ground level to optimize the functional operating range of the wireless control panel.

Note: To avoid signal interference, mount the Transceiver antenna a minimum of 10 ft. away from the Power Center, any metal surface/structure, or air blower located in the immediate area of the equipment pad.

To mount the transceiver near the IntelliCenter Control System Load Center:

1. **Switch OFF the main power off to the Power Center.**
2. Remove the two retaining screws securing the transceiver case to the back plate. Carefully slide the case off the back plate.
3. **CAUTION - Electrostatic Discharge (ESD):** Hold the circuit board from the edges. Do not touch the board components, electrostatic discharge can damage the board. Slide the transceiver circuit board up and out of the back plate.
4. Position the back plate against the mounting surface so that the case is oriented in an upright position (with the antenna pointing upwards). Use a pencil to mark the four mounting points. Drill four 3/16 in. diameter holes into the mounting surface. If screws are not being used, insert the four plastic wall anchors (provided in the kit).
5. Feed the provided 10 ft. of UL approved four 22 AWG conductor cable through the knockout hole at the bottom of the enclosure. Do not run wire through the drain holes. If the knockout hole is not being used to run wire through, drill a hole through the bottom of the back plate, route the wire through the hole and seal it using a fitting with a few feet of conduit or some other sealant between the case and the cable.
6. Position the back plate over the mounting points and secure it with the four mounting screws (provided in the kit).

7. Carefully slide the transceiver circuit board into the back plate.

8. Strip the leads of the communication cable wires back ¼ in. Insert the wires into the connector screw terminals (provided in the kit). Using a small flat-blade screwdriver, secure the wires with the terminal screws. Make sure to match the color-coding of the wires: GND = Black, Green = -DT, Yellow = +DT, and Red = +15. Connect the screw terminal connector onto the transceiver circuit board.

9. Slide the case over the back plate. Secure the case to the back plate using the two retaining screws.

Connecting the Transceiver to the Power Center

**WARNING** SWITCH OFF AC POWER to the Power Center before making any connections.

To connect the Transceiver wires to the COM port on the Power Center circuit board:

**WARNING** BEFORE REMOVING THE HIGH VOLTAGE COVER PANEL FROM THE POWER CENTER ENCLOSURE switch OFF the power at the house main circuit breaker box.

1. Switch OFF AC power to the enclosure at the main house panel circuit breaker.
2. Unlatch the front door latch and open the front door. Remove the two retaining screws from the High Voltage Cover Panel and remove the panel.
3. Loosen the two retaining screws securing from the top edge of the Outdoor Control Panel. Fold down the Outdoor Control Panel to access the circuit board sockets connectors for the electrical connections. Remove the panel from the enclosure (see illustration below).
4. Route the four conductor transceiver connection cable into the lower plastic grommet, up through the low voltage raceway to the system circuit board.

EasyTouch® PL4/PSL4 Control Systems Power Center (front view)
5. Strip the leads of the communication cable wires back ¼ in. Insert the wires into the connector screw terminals (provided in the kit). Using a small flat-blade screwdriver, secure the wires with the COM PORT (J20) terminal screws. Note: Multiple wires may be inserted into a single screw terminal. Make sure to match the color-coding of the wires: GND = Black, Green = -DT, Yellow = +DT, and Red = +15. Connect the screw terminal connector onto the transceiver circuit board.

6. After electrical connections have been completed; close the Outdoor Control Panel and tighten the two retaining screws. Reinstall the High Voltage Panel: Insert the panel’s three tabs into the lower slots on the enclosure. Secure the panel with the two (2) retaining screws. Close the front door and secure with the latch.

7. After the Power Center is powered up the Wireless Controller will automatically synchronize with the system and will be ready for operation.

8. SWITCH ON AC POWER to the Power Center.
EasyTouch® PL4/PSL4 Control Systems Circuit Board Connections

The EasyTouch PL4/PSL4s Control System circuit board is mounted in the top of the Power Center. The circuit board provides the voltage connections to the filter pump, heater, auxiliary relays, motorized valves and for temperature sensors. The COM port on the EasyTouch PL4/PSL4 circuit board provides connection to the EasyTouch PL4/PSL4 Control Systems indoor control panel, wireless remote transceiver, SpaCommand and iS4 spa side remote and to the IntellilFlo® Pump.

EasyTouch® PS4/PSL4 Control System Outdoor Circuit Board Connections

EasyTouch PL4/PSL4 Control Systems Outdoor Control Panel
EASYTOUCH® PL4/PSL4 Control Systems Wiring Diagram
System Start-Up

The following information describes basic start-up procedures. For more detailed troubleshooting information, refer to the EasyTouch PL4/PSL4 Systems User's Guide (P/N 522561). Before you power up the Power Center check the following:

Check Electronics

Check that the following plugs are seated correctly on the Personality board:

- Relay connectors - FLTR PUMP - AUX1 - AUX3
- Temperature sensors connectors WATER, SOLAR, AIR
- Transformer conductor harness J1 attached to the EasyTouch PL4/PSL4 Control Systems circuit board.
- Heater control connector ELEC HTR or two-conductor screw terminal.

Note: See system wiring diagram on page 31.

System Test

The following describes how to test the Outdoor Control Panel to activate the heater, valves and pumps. This test assumes that all system equipment has been properly installed and connected to the Power Center.

Testing Valve Actuators and Pumps

Use the following steps to test the valve actuators (CVA24T) for proper rotation for PSL4 Control System (shared equipment).

To test the valve actuators and pump:

1. Power up the Power Center.
2. Press the MODE button on the Outdoor Control Panel until the SERVICE is displayed on the screen.
3. Press the V (Valve) button to select POOL.
4. Press the F (Filter Pump) button to activate the filter pump. Water will be removed from the pool and returned to the pool.
5. Set both valve actuators (CVA-24T) for suction and return. Use the toggle switch on the rear of the CVA-24 to withdraw and return water from the pool.

Note: With the filter pump operating, if the water is not being removed and returned to the pool, it may be necessary to reverse the RETURN with INTAKE plugs on the EasyTouch PL4/PSL4 Control Systems circuit board.

Testing the auxiliary relays

Affix the auxiliary relay labels to the appropriate buttons on the EasyTouch PL4/PSL4 Control Systems control panel. If necessary, write the function on the control panel.

- Toggle the filter pump, each auxiliary circuit, heater and solar and verify the function. Press the SYSTEM CONTROL button to set the system in “AUTO” mode when done.
Solar System Installation

- To ensure maximum flow of water through the solar panels, a solar booster pump should be added if panels are installed at a very high elevation.
- It is recommended that the solar panels are mounted in a way that gravity will allow draining whenever the filter pump is not on.
- For systems with glazed panels, damage can occur from overheating if the filter pump is still running after the solar has turned off. To enable glazed panels to automatically drain whenever the solar turns off (even if the filter pump is still running), a 1/2" motorized solar drain valve should be plumbed from the solar feed line, through a check valve, to a zero psi point (such as pool fill line or jet air intake).

Solar System Start-Up

1. Switch power on to the EasyTouch® PL4/PSL4 Control Systems Power Center.

2. If pool cleaner protection has been added to the system, the pool cleaner pump motor should be activated whenever the pool cleaner timer is on. Momentarily turn pool cleaner on and off to check the motor is operating correctly.

3. Check that Solar Valve is in “solar bypass” position, diverting water away from solar panels. If Solar Valve is staged incorrectly (diverting water to the solar panels), reverse switch on back of Valve Actuator (change from ON1 to ON2, or vice-versa). The Valve Actuator will automatically rotate to the correct position.

4. Check that Solar Valve has rotated from the “solar bypass” position to the “solar” position, diverting water through the solar panels.

5. The system is now ready to be operated as desired.

Pool Cleaner Protection

Recommended for use in pool systems which utilize a “booster pump” pool cleaner. This feature automatically turns off the pool cleaner pump for a few minutes whenever solar is initiated. This will protect the pump from damage caused by air in the solar panels at system start-up.

Installing the EasyTouch® PL4/PSL4 Control Systems Outdoor Control Panel

**WARNING** BEFORE INSTALLING THE Power Center AND POWER CENTER, ALWAYS SWITCH OFF THE MAIN POWER into the home at the main circuit breaker box.

The EasyTouch PL4/PSL4 Control Systems Outdoor Control Panel installs in the top part of the Power Center enclosure. The control panel controls and distributes high voltage power to the valve actuators, control pumps, lights, and heater operations. The optional EasyTouch PL4/PSL4 Control Systems Indoor Control Panel, Wireless Controller, iS4 and QuickTouch® Controller also controls these and other functions, such as pool and spa lights.

To install the Outdoor Control Panel:

1. Remove the Outdoor Control Panel from its packaging.
2. Unlatch the front door spring latch and open the front door.
3. Remove the two retaining screws from the High Voltage Cover Panel. Remove the panel from the enclosure.

Proceed with Step 4 on next page.
4. Loosen the two retaining screws securing from the top edge of the Outdoor Control Panel. Fold down the Outdoor Control Panel to access the circuit board sockets connectors for the electrical connections.

5. Mount the Outdoor Control Panel in the top part of the Power Center. Secure the lower edge of the control panel with the two retaining screws. Once secured, the control panel can hinge out and down to access the circuit board and other low voltage connections.

6. After electrical connections have been completed; close the Outdoor Control Panel and tighten the two retaining screws. Reinstall the High Voltage Panel: Insert the panel's three tabs into the lower slots on the enclosure. Secure the panel with the two (2) retaining screws. Close the front door and secure with the latch.
EasyTouch® PL4/PSL4® Control Systems Outdoor Control Panels

Note: See system wiring diagram on page 31.

Shared Equipment Systems Model or Single Body Systems (no valves)

Wireless Controller (3 AUX circuits) (P/N 520547) (Optional)

Indoor Control Panel (3 AUX circuits) (P/N 520549 - Optional)
Plumbing Requirements

It is important that the pool and spa plumbing system be in accordance with local codes and the Recommended Hydraulic Schematics (page 36 and 37). Before starting, please review the diagrams and the following recommended guidelines:

1. The spa should be at or above the level of the pool.

   If the spa is attached to the pool, provide a dam between the two bodies of water to allow the spa to overflow into the pool. If the spa is not attached to the pool, an overflow, sufficient in size to carry a full pump-flow, must be installed at the water level in the spa.

2. Plumb a three-port Intake Valve on the suction-side of the filter pump, so that the center port of the valve is connected to the pump inlet. Connect the spa suction to one side of the Intake Valve, and the pool suction to the other side.

3. Plumb a three-port Return Valve on the return-side of the heater, so that the return water will enter the valve through the center port.

   Connect the spa return to one side of Return Valve, and the pool return to the other side.

4. If required, install a spa makeup line (consisting of a manual gate or ball valve, for elevated spas install a check valve) to bypass the pool return line. This will enable some of the chemically-balanced water from the pool to cycle through the spa. The manual valve will allow the amount of bypass to be adjusted.

5. If the spa is to be constructed in concrete, special provision should be made at this time for the installation of the Spa-Side remote control.

   Select a convenient location in the deck or above water level in the spa wall (where the Spa-Side remote will not be submerged by the spa water), and install a 6 in to 12 in length of one inch PVC pipe to provide a receptacle for the Spa-Side remote. The pipe should be level and protrude beyond the finished surface of the spa. It will be cut back later at installation time. Reduce the pipe size down to ½ in or ¾ in conduit, and run it to the proposed Load/Power Center location at the equipment pad. Use sweep elbows for turns.

   The Spa-Side remote will not be installed until the spa construction is completed.

6. For systems which incorporate a skimmer, it is possible to balance the amount of suction between the skimmer and main drain for maintenance purposes. This is easily accomplished by installing a manual three-port mixing valve at the suction line. Plumb one port to the skimmer and the other to the main drain.

7. If a “non-booster pump” pressure-side pool cleaner is being used, plumb a manual three-port valve between the filter pump and filter, with the third port plumbed to the pool cleaner line, and install a motorized two-port Pool Cleaner Valve at this line. The motorized valve will automatically open whenever the Control System activates the pool cleaner.

8. If a booster pump pool cleaner is being used, plumb the booster pump so that its suction-side is connected to the pool return, after the heater, and as close to the ground as practical.
Plumb the solar feed and return lines between the filter and the heater. Install a three-port valve at the feed line. Use a solar valve (model SOL-2T), to allow automatic draining of the panels.

A solar booster pump should be used when the distance to the panels exceed 200 ft., or the panels are elevated higher than 25 ft.

Glazed solar panels require a drain valve (model HW-5B) to allow draining of the panels. This prevents damage from overheating water. Install a drain valve at the solar feed line and connect to the pool fill line.

**SCG systems only:** IntelliChlor IC40 or IC20 Salt Chlorine Generator cell with check valve at the heater output. Refer to IntelliChlor Salt Chlorine Generator User’s Guide (P/N 520589) for plumbing requirements.

**Equipment Location**

All equipment, with the exception of the spa-side remote, must be located at least 10 ft. from the water’s edge.
Recommended Hydraulic Schematic for Single Body System
Glossary

**Circuit board:** The main circuit board mounted behind the Outdoor Control Panel.

**EMI (Electromagnetic interference) filter:** Protective circuit element that must be used between the IntelliChlor transformer and supply lines.

**Feature Circuits:** Programmable circuits that may control relays and/or valve actuators. For details, see the EasyTouch PL4/PSL4 Control Systems Systems User’s Guide (P/N 522461)

**High Voltage Compartment:** Large lower right compartment of Power Center for all high voltage wiring including circuit breakers, relays, and GFCI.

**High Voltage Panel/Compartment:** Removable panel for the high voltage compartment of EasyTouch PL4/PSL4 Control Systems Power Center. The high voltage wiring including circuit breakers, relays, GFCI and optional IntelliChlor transformer/filter.

**Indoor Control Panel:** This EasyTouch PL4/PSL4 Control Systems remote controller with LCD (liquid crystal display) is wired to the Personality board (EasyTouch PL4/PSL4) or Motherboard (EasyTouch PL4/PSL4) in the Power Center. The control panel can be wall mounted inside a house to control the EasyTouch PL4/PSL4 Control Systems.

**IntelliChlor® (SCG):** Salt Chlorine Generator. Uses a process known as electrolysis to produce sodium hypochlorite (liquid chlorine) from a low concentration of salt added to the pool water. Model IC 20 Cell (P/N 520554) for pools up to 20,000 U.S. gallons (75 liters) and model IC 40 Cell (P/N 520555) for pools up to 40,000 U.S. gallons (151 liters). The external IntelliChlor Salt Chlorine Generator Power Center (P/N 520556).

**iS4 Wireless Controller:** Four function spa-side remote. Spa wall or deck mounted.

**Low Voltage Compartment:** Top compartment behind the main circuit board in the Power Center for all low voltage wiring.

**Low Voltage Raceway:** Vertical space in the left side of Power Center for low voltage cabling.

**Mud Box:** Enclosure to provide mounting features for SpaCommand controller or iS10 spa-side remote that is cast into gunite, concrete, or other spa wall/deck construction.

**Outdoor Control Panel:** Control panel with flexible hinge installed in upper portion of Power Center to control EasyTouch PL4/PSL4 Control Systems.

**Power Center:** Enclosure without circuit breaker base. Used for distributing power for controlling EasyTouch PL4/PSL4 Control Systems. Also known as the “sub-panel.”

**Relay Circuits:** The circuits that control the relays on the EasyTouch PL4/PSL4 Control Systems circuit board.

**Screw Terminal Connector:** Removable connector that may attach to circuit board with multiple sockets (anywhere from 2 to 12) to receive conductors from controllers and sensors; conductors held by screw terminals; multiple conductors of a small enough gauge (usually 22 AWG) may be coupled to a single socket of a terminal connector.

**Salt Chlorine Generator (SCG):** Automated pool chlorinator that sanitizes using salt water (see IntelliChlor Salt Chlorine Generator).

**Transceiver:** Circuit board with attached antenna that can send and receive radio frequency (wireless) transmissions. Used with QuickTouch® II Wireless Controller.

**Wireless Controller (EasyTouch PL4/PSL4 Control Systems):** Wireless controller for the EasyTouch PL4/PSL4 Control Systems with all the functionality of the Indoor Control Panel.
